

IN THE CLAIMS

1. (Withdrawn-currently Amended) A method of treatment of a malignant neoplasms neoplasm, the method comprising injecting a complex preparation comprising alpha-fetoprotein (AFP), a cytotoxic substance, and a filler; a polyene antibiotic, and a saccharide filler, wherein a mass ratio of the AFP to the polyene antibiotic cytotoxic substance to the filler is 1:(60-100):(50-70).
2. (Currently Amended) A complex preparation for treatment of malignant neoplasms comprising alpha-fetoprotein (AFP), a cytotoxic substance a polyene antibiotic, and a filler a saccharide filler, wherein a mass ratio of the AFP to the polyene antibiotic cytotoxic substance to the filler is 1:(60-100):(50-70).
3. (Cancel)
4. (Previously Presented) The complex preparation of claim 2, wherein the filler is selected from the group consisting of dextran 100, dextran 70, dextran 40 and glucose.
5. (Currently Amended) The method of claim 1, wherein the cytotoxic substance comprises a polyene antibiotic, the polyene antibiotic, the polyene antibiotic is being selected from the group consisting of amphotericin B and nystatin.
6. (Currently amended) The complex preparation of claim 2 method of claim1, wherein the filler comprises at least one of a polysaccharide and glucose, the polysaccharide being selected from the group consisting of polyglykine, rheopolyglykine, polyglucin, rheopolyglucin and dextran.
7. (Previously Presented) The method of claim 1, further comprising injecting the complex preparation in a course of ten injections once in three days, wherein a single dose comprises 0.07-0.15 mg of the AFP, 4.2-7.0 mg of the cytotoxic substance, and 3.5-5.0 mg of the filler.
8. (Currently Amended) The complex preparation of claim [3] 2, wherein the polyene antibiotic is amphotericin B.
9. (Currently Amended) The complex preparation of claim [3] 2, wherein the polyene antibiotic is nystatin.
